

**Amendments to the Claims:**

Claims 1-10, 13-16, and 18-23 are currently pending. Claims 1-3, 5-6, 8-10, 13-16, and 18-20 have been amended. Claims 11-12 and 17 have been canceled. Claims 21-23 have been added. This listing of claims will replace all prior versions, and listings of claims in the application:

**Listing of Claims:**

1. (Currently Amended): An active media content access system, comprising:  
~~a control station;~~  
a housing;  
an electronic system disposed in said housing and configured to store and upload  
~~capable of storing and uploading~~ event data relating to at least one television event, wherein said  
~~electronic system contains~~ event data includes information for a current time, a current date, a  
current device, and/or a current channel associated with said television event;  
a communication device disposed in the housing and electronically coupled  
~~connected~~ to said electronic system, said communication device being web enabled and  
configured to upload for uploading said event data to ~~said~~ a control station via a network  
connection; and  
an input device means coupled to said housing and electronically coupled  
~~connected~~ to said electronic system, the input device, if selected, being configured to direct for  
~~indicating when~~ said electronic system should to log said event data ~~comprised of said current~~  
~~time, said current date and said current channel.~~
2. (Currently Amended): The active media content access system of Claim 1,  
wherein said input ~~means~~ device includes a selection button.
3. (Currently Amended): The active media content access system of Claim 2,  
wherein said input ~~means~~ device includes a display and a keypad.

4. (Original): The active media content access system of Claim 3, wherein said electronic system is capable of receiving user preference data relating to personal preferences.

5. (Currently Amended): The active media content access system of Claim 4, wherein said control station is configured to communicate ~~in communication~~ with a plurality of programming stations via the network connection for receiving updated television event information that is associated with said television event.

6. (Currently Amended): The active media content access system of Claim 5, wherein said control station is configured to compare ~~compares~~ said event data to said television event information to determine ~~what a~~ type of information to send to said user.

7. (Original): The active media content access system of Claim 6, wherein said control station is programmable by said user to reflect said personal preferences.

8. (Currently Amended): The active media content access system of Claim 7, wherein said personal preferences includes ~~type of information to receive relating~~ related to said television event.

9. (Currently Amended): The active media content access system of Claim 8, wherein said communication device is configured to communicate ~~in communication~~ with said control station via a ~~global computer~~ network.

10. (Currently Amended): A method of using an active media content access system having an electronic system with a communication device and an input device, wherein said communication device is configured to communicate ~~in communication~~ with a control station, said method comprising the steps of:

(a) ~~viewing a television event;~~

(b) receiving a log event data indication from a user for a viewed television event;

and

(e) logging an event data within said electronic system at substantially the time of receiving said log event data indication, wherein said event data is comprised of a current date, a current time, a current device, and a current channel for said viewed television event at the time of receiving said log event data indication;

uploading said event data to said control station from said communication device, which is web enabled, via a web communication link

determining an identity of said television event from said event data; and

determining whether information is available regarding said television event; and

providing available information to said user.

11 - 12. (Canceled)

13. (Currently Amended): The method of using an active media content access system of Claim ~~43~~ 10, wherein the step of providing includes transferring said available information to said communication device via said web communication link ~~providing available information to said user.~~

14. (Currently Amended): The method of using an active media content access system of Claim 13, ~~including the step of:~~ wherein the step of providing includes (h) sending an e-mail containing said available information to a computer system associated with said user.

15. (Currently Amended): The method of using an active media content access system of Claim 12, including the step of:

(g) providing available information depending upon predefined user preferences.

16. (Currently Amended): A method of using an active media content access system having an electronic system with a communication device and an input device, wherein said communication device is configured to communicate in communication ~~in communication~~ with a control station, said method comprising the steps of:

(a) ~~initializing programming~~ a current date, a current time, a current device and/or a current channel ~~into~~ in said electronic system;

(b) ~~viewing a television event~~;

(c) receiving a log event data indication from a user for a media presentation; and

(d) logging an event data for said media presentation within said electronic system at substantially the time of receiving said log event data indication, wherein said event data is comprised of a current date, a current time, a current device, and a current channel for said media presentation ~~at the time of receiving said log event data indication~~;

wirelessly transferring said event data to said control station via a wireless web link between said electronic system and said control station; and

via the wireless web link, wirelessly receiving information relevant to said event data from said control station .

17. (Canceled)

18. (Currently Amended): The method of using an active media content access system of Claim 17, including the steps of:

(f) determining an identity of said media event ~~television event~~ from said event data; and

(g) determining whether said information is available regarding said media event ~~television event~~.

19. (Currently Amended): The method of using an active media content access system of Claim 18, including the step of:

(h) providing the available information to said user.

20. (Currently Amended): The method of using an active media content access system of Claim 19, including the step of:

(i) sending an e-mail containing said available information to a computer system associated with said user.

21. (New) The active media content access system of claim 1, wherein said network connection is a wireless network connection.

22. (New) The active media content access system of claim 1, wherein said electronic system is configured to execute code for a browser program configured to browse the network.

23. (New) The active media content access system of claim 22, wherein said electronic system is configured to receive web page information for a web page from said control station and display the web page via the browser program.
